-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

Art Unit: 3747

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 and 14-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kempfer ('294) in view of Lomax.

Kempfer applies as per the last office action.

Lomax teaches using the reformer gas to help operate the metal Hydride element of the fuel cell system . This reference therefore teaches using the hot gas of the reformer to directly operate a secondary system of the vehicle. The metal hydride is not preheated electrically but through direct contact with the hot reformer gas. It would have been obvious to use a delay in the system since the temperature is being monitored.

It would have been obvious to modify Kempfer by using direct heat coupling with the reformer flow to run the engine component because Lomax taught this type of direct preheating in a similar environment.

Claims 10-13 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Applicant's arguments filed February 7, 2005 have been fully considered but they are not persuasive.

In particular, the applicant's argument that no direct thermal coupling occurs in Kempfer has been addressed by the application of the teachings of Lomax.
